The Checkout is Broken

Shoppers

Average person spends over 20 hours a year waiting in lines.

Long queues are no. 1 complaint in retail, leading to poor shopping experience

Retailers

75% of shoppers will leave a store if the line is too long. Every abandoned cart is a direct loss of revenue.

Cashiers are a major operational expense.

Introducing Q-Skip: Scan, Pay, and Go

Q-Skip is a universal mobile platform that empowers shoppers to skip the checkout line entirely.

Turning the smartphone in every pocket into a secure, personal checkout counter.

For Shoppers: A single, seamless app that works across all their favorite local stores.

For Retailers: A powerful, affordable tool to increase efficiency, boost sales, and delight customers.

As Easy as 1-2-3.

1

SELECT:

Open the app and select your local store.

2

SCAN & BAG:

Scan product barcodes with your phone's camera.

3

PAY IN-APP:

Pay securely with your saved payment method.

DON'T FORGET:

To present the QR code of your receipt to the guard and complete your purchase

Built on Trust.
Secured by Technology.

Market Opportunity

₹75 Lakh Crore

Total Indian Retail Market

6 Million +

Serviceable Addressable Market

Competitive Landscape,

Our Unique Position

Proprietary System,
Large chains,
Popular in foreign
countries

Open Platform,
designed for Indian
Markets

We are the only solution providing this
modern experience for the
independent stores that make up 90%
of the market.

Target

Capture 1% of the urban
independent retail market in 3
years, representing a ₹500 Crore+
transaction value opportunity.

Beach-head

College campus supermarkets,
tech-savvy environments filled
with innovative minds, making
them ideal for early adoption

Business Model

Primary Revenue

Store

Basic Plan: ₹1,499/month (based on store size)

-Transaction Volume ≤ 500

Pro Plan: ₹2,999/month (based on store size)

-Unlimited Transactions

-Access to Merchant tools: Dashboards & Analytics

Secondary Revenue

Transaction Fee: 0.5% commission on each transaction processed through the app.

-Revenue tied directly to sales success.

Promotion & Advertising: Feature listing, targeted coupons, discounts

Go To Market Strategy

Disrupting Retail Checkout with Seamless B2B SaaS for Supermarkets & Chains

Phase 1

- Pilot at BITS campuses, onboard students & supermarkets, prove product-market fit.
- Offer early supermarket partners a limited-time free trial or exclusive pricing, plus co-marketing support to drive initial traction.
- Run in-store demo days with campus ambassadors to directly onboard students and gather feedback.

Phase 2

- Expand to other colleges.
- Launch POS API for seamless vendor integration
- Reach out local superstores having checkout counters.
- Expand to tier-2 cities, integrate with POS vendors, build trust via certification.

Phase 3

- Enter into major markets like Delhi, Mumbai, Bangalore
- Running co-branded promotional campaigns with chain partners(Large scale chains like Big Bazaar, Vishal Mega Mart etc), offering first-time shoppers extra benefits.
- Develop advanced data analytics dashboards and loyalty integration exclusive to large chains as a differentiator.

Guesstimate: The Value Delivered to Shoppers

- Assume YEAR 1
- Let there be 20 stores opting for Q-skip as their checkout alternative
- Assume: 300 customers/ day (varies according to the size of the store)
- Total Daily Shoppers: $20 \times 300 = 6000$ shoppers/day
- Assume 5% customers adopt the app: $6000 \times 5\% = 300$ transactions/day
- Average Traditional Checkout Time: 3-4 Minutes in off-peak hours/10-15 minutes in rush hours ~ 7 minutes/shopper
- Average Q-skip Checkout Time= 1 minute
- Time Saved= $7-1 = \mathbf{6 \text{ minutes saved/shopper}}$

12,000+ Hours Saved Annually!

Guesstimate: Value Delivered to Retailers (Initially)

Increased Labor Efficiency

- A cashier, including greeting, scanning, bagging, and handling payment, can process roughly 20 transactions per hour.
- Your app is handling 300 transactions per day across the network.
- Total Cashier Hours Saved Across Network: $300 \text{ transactions} / 20 \text{ transactions/hour} = 15 \text{ cashier hours saved per day} = 15 \times 365 = 5475 \text{ hours/year saved}$

Increasing Revenue

- Industry Data ~ 5% cart abandonment rate
- Assume at peak period, the store has 100 customers = $100 \times 5\% = 5 \text{ lost sales}$
- Let's conservatively estimate that Q-Skip, as a readily available alternative, can save 40% of these would-be abandoners.
- Sales Saved Per Store Per Day: $5 \text{ lost sales} \times 40\% \text{ saved} = 2 \text{ sales saved}$.
- Average Transaction Value ~ ₹500.
- Additional Revenue Per Store Per Day: $2 \text{ sales} \times ₹500/\text{sale} = ₹1,000$.
- Average Cashier Cost = ₹100/hour, i.e $5475 \times 100 = ₹5,47,500/\text{year} \rightarrow 547500/20 = 27375 \text{ annual cashier cost saving/store}$
- Additional Annual Revenue Per Store: $₹1,000/\text{day} \times 365 \text{ days} = ₹3,65,000$
- Total Additional Revenue Per Store = $₹27,375 + ₹3,65,000 = ₹3,92,375$ (~₹3.9 lakh per store annually)

Thank You
